# Embedding a Facebook Group-Wall into iModules using Wallflux

Wallflux (*https://www.wallflux.com*) is an app that can help you to embed your **Facebook Group-Walls** to iModules using **iframes**.

To access a Wallflux feed you need your group's 8-14 digit Facebook group ID. This ID is displayed at the end of the URL address field of your browser, when viewing your group page at Facebook.

Or, you can look it up on the Facebook ID Service-Page on the Wallflux website (*https://www.wallflux.com/#find-id*).

Wallfux Facebook ID Service Page

Once you have your Facebook ID, paste it into the following html-code and insert it into the html source of your iModules page:

```
<iframe id="wallflux"
  name="iframe"
  src="https://www.wallflux.com/iframe/{your Facebook Group id}"
  width="100%;"
  height="250px"
  frameborder="0"></iframe>
```

Wallflux iframes embedded with a width of less than 500 pixels are designed to automatically hide the top demonstration notice because of space constraints. Wallflux iframes are transparent, allowing you to define your own background color or image.

Class of '79 Facebook Group-Wall embedded in iModules page

Wallflux offers both a free services and an upgraded registered service with an annual fee of €15 (less than $20USD) per year. The registered pay service offers the following enhancements:
- Your feed will be live
- Wallflux won't display a demonstration notice
- Links are served without delay.

You can register a Wallflux account at ***https://www.wallflux.com/registration.html*** and use PayPal to pay.
